

University of Economics Dormitories in Prague - procedure in case of bed bug discovery:

1. Inform the supervisor of your dorm unit.
2. Report to a disinfestation company and arrange a date for repressive action.
3. Minimise visitations of other rooms.
4. Do not move any furniture or personal belongings.
5. Before disinfestation it is necessary to put all personal belongings in plastic bags (empty out closets, night stands, bed storage) and leave them in a closed bag inside the room.
6. Allow the disinfestation company to chemically treat the area.
7. After the disinfestation, move all the items from the plastic bags (including mattresses) into the laundry room and wash at a temperature of min. 60°, and then iron. If the mattress can't be separated from the bed then we recommend to steam it with a steam cleaner.
8. The room should be vacuumed only, not cleaned using water (and the bag from the vacuum cleaner should be disposed off immediately).
9. Allow occupants to return and repeat activity within a range of 3 - 4 weeks until the bed bugs are completely eradicated.
